All-in-one solution for Remote Access and Web Portal

THE BEST REMOTE ACCESS ALTERNATIVE.

MLine+ - Mobile Web edition

MLine+ is the best solution that allows your employees to remotely access and use Windows applications from any device. Seamless and easy to deploy, configure, and maintain, MLine+ is the perfect and low cost solution to deploy Windows Applications and Desktops over the Web.

With the MLine+ Web Portal and the MLine+ App, users are able to securely access server resources from Windows, Linux, Mac, iOS, Android, Thin Client, Chromebook, and more. Collaboration between clients now allows you to switch your mobile or tablet into a fully-fledged desktop.

In just few steps, administrators can quickly identify Windows applications installed on the MLine+ server and can choose what applications will be available and presented to user

Standard features

Remote Desktop Access

MLine+ enables any of your Windows from XP to Windows 10 and Server 2003 to 2016 to act as a Citrix or a Terminal Server. MLine+ supports concurrent Remote Desktop (RDS) connections, printer mapping, disk mapping, port com mapping, bi-directional sound, remoteFX, dual screen. Any RDP compatible client can be used to connect on a MLine+ System.

Portable Client Generator

MLine+ enables you to generate a portable remote connection client that integrates all the required settings. The final user does not have to remember his customized parameters anymore; a simple click on the generated client program and he is connected to his remote server.

Seamless and RemoteApp

MLine+ allows publishing of a single application for a given user. The application will be displayed on the local user desktop, not on a remote desktop standard session. It will look as if the application was running on his computer (like Citrix or MS RDS applications).

Universal Printer

MLine+ Universal Printer enables you to print from any location, without having to install any specific printer driver.

Easy-to-use administration tool

MLine+ Administrator Tool is a unique application that centralizes all of the server's configuration tools, including Windows features, in one easy-to-use interface.

Active Directory Support

Allows administrators to easily control access to Windows apps based on Active Directory user groups. Also works with local groups and users (Workgroup).

Application Publishing

Publish applications for a selection of users and/or groups and they will have access only to their applications through MLine+ Remote Taskbar and MLine+ Floating Panel (no Windows "Start" menu, no Windows desktop).

Open on Client

When working remotely on your server, MLine+ allows opening Word documents, Excel workbooks and other files automatically on the user side. There is no need to install Office on the host server.

Web features

Web Access

MLine+ built-in HTTP Web Server enables you to connect from any web browser: Internet Explorer, Firefox, Chrome, Opera.

The provided html pages includes Windows, Linux and MAC web access clients, as well as a JAVA client for any JAVA-enabled web browser.

More about web-enabling legacy Windows applications.

Connect from computers, tablets & mobiles

MLine+ built-in HTML5 client provides a browser access to Windows applications and user desktops from all types of end-user devices, without having to install anything on the device (no plugin or app required).

MLine+ HTML5 connections look, work and perform like a native RDP connection; with a fast file transfer and even with sound and clipboard support.

SecureWeb Tunnel

MLine+ built-in HTTPS Web Server and SSH server enables you to connect fully securely from any web browser with SSH Tunneling and port forwarding over HTTP and HTTPS.

Without complex VPN, all network communications are end-to-end encrypted. The tunnel is established over the port 80 or 443 and the port 3389 is not required nor requested anymore.

Web applications portal

Publish applications through the web and your users will be able to access their applications directly from the Internet, simply by clicking on the application icon on the MLine+ Web Portal.

Web Credentials

Using MLine+ Web Credentials, your users can connect with a simple PIN code or their e-mail address, without having to enter (or to know) the matching Windows credentials.

It can be very useful if you publish a business application with its own authentication scheme, or if you want to ease the remote access from a tablet inside your corporate network.

Customizable web portal

With MLine+ Webmaster Toolkit it is really easy to customize Web Access pages with your company colors, name and pictures. In one click and without any web design skills your users entry point looks corporate!

Farm features

Gateway Portal

MLine+ Gateway Portal enables access to multiple servers with web control of the user credentials and Single-Sign on (SSO). It is also possible to assign specific servers to specific users or groups, in order to control servers access.

Load Balancing

MLine+ load balancing feature can split the load between multiple servers of your cluster. It also allows falling back to failover servers in case of a production incident. Benefit from an unlimited number of servers within one farm.

And much more...

Lowest-cost Citrix/TS product available on XP, VISTA, W7, W8, W10 and 2003 to 2016 systems (32 and 64 bits). No requirement for Terminal Service CALs. No need for Terminal Service (Remote Desktop Service) license manager. Two-Factor Authentication (2FA) is also available, with our partner and leader of Multi-Factor Authentication: SAASPASS.

Benefits overview

- ✓ Lowest-cost Citrix/RDS product available on all operating systems from XP to Windows 10 and Server 2003 to 2016.
- ✓ No requirement for Terminal Service CALs. No need for Terminal Service (Remote Desktop Services) license manager
- ✓ Low cost, high value, and excellent performance in an easy-to-use solution
- ✓ Support of 32 bit colors, dual-screen, bi-directional sound, USB devices and much more
- ✓ Enhanced AdminTool simplifies the server management process
- ✓ Advanced Application Control by user and/or by group
- ✓ Fast file transfer between the user PC and the MLine+ server
- ✓ Extended remote printing capabilities made possible by our MLine+ Universal Printer
- ✓ Load balancing and failover allow up to ten servers within one farm
- ✓ Secured server communication (Hide server drives, RDP firewall, encryption...)
- ✓ Seamless Application Publishing and Remote APP (such as Citrix or MS RDS)
- ✓ Internet Web Access using IE, Opera, Netscape, Filezilla
- ✓ Secured Web Access with port forwarding over HTTP and HTTPS
- ✓ Gateway Portal to connect to multiple servers
